LIMITED WARRANTY AND LIMITATION OF LIABILITY

Horner Electric, Inc. ("HE") warrants to the original purchaser that HEC-GV3-DN and HEC-GV3-RTU Option Modules for use with Reliance Electric GV3000 AC Drive manufactured by HE are free from defects in material and workmanship under normal use and service. The obligation of HE under this warranty shall be limited to the repair or exchange of any part or parts which may prove defective under normal use and service within two (2) years from the date of manufacture or eighteen (18) months from the date of installation by the original purchaser whichever occurs first, such defect to be disclosed to the satisfaction of HE after examination by HE of the allegedly defective part or parts. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES EXPRESSED OR IMPLIED INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR USE AND OF ALL OTHER OBLIGATIONS OR LIABILITIES AND HE NEITHER ASSUMES, NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR HE, ANY OTHER LIABILITY IN CONNECTION WITH THE SALE OF THIS HEC-GV3-DN AND HEC-GV3-RTU OPTION MODULES. THIS WARRANTY SHALL NOT APPLY TO THIS THIS HEC-GV3-DN and HEC-GV3-RTU OPTION MODULES OR ANY PART THEREOF WHICH HAS BEEN SUBJECT TO ACCIDENT, NEGLIGENCE, ALTERATION, ABUSE, OR MISUSE. HE MAKES NO WARRANTY WHATSOEVER IN RESPECT TO ACCESSORIES OR PARTS NOT SUPPLIED BY HE. THE TERM "ORIGINAL PURCHASER", AS USED IN THIS WARRANTY, SHALL BE DEEMED TO MEAN THAT PERSON FOR WHOM THE HEC-GV3-DN and HEC-GV3-RTU OPTION MODULES ARE ORIGINALLY INSTALLED. THIS WARRANTY SHALL APPLY ONLY WITHIN THE BOUNDARIES OF THE CONTINENTAL UNITED STATES.

In no event, whether as a result of breach of contract, warranty, tort (including negligence) or otherwise, shall HE or its suppliers be liable of any special, consequential, incidental or penal damages including, but not limited to, loss of profit or revenues, loss of use of the products or any associated equipment, damage to associated equipment, cost of capital, cost of substitute products, facilities, services or replacement power, down time costs, or claims of original purchaser's customers for such damages.

To obtain warranty service, return the product to your distributor with a description of the problem, proof of purchase, post paid, insured and in a suitable package.

ABOUT PROGRAMMING EXAMPLES

Any example programs and program segments in this manual or provided on accompanying diskettes are included solely for illustrative purposes. Due to the many variables and requirements associated with any particular installation, Horner Electric cannot assume responsibility or liability for actual use based on the examples and diagrams. It is the sole responsibility of the system designer utilizing HEC-GV3-DN and HEC-GV3-RTU Option Modules to appropriately design the end system, to appropriately integrate the HEC-GV3-DN and HEC-GV3-RTU Option Modules and to make safety provisions for the end equipment as is usual and customary in industrial applications as defined in any codes or standards which apply.

Note: The programming examples shown in this manual are for illustrative purposes only. Proper machine operation is the sole responsibility of the system integrator.

CHAPTER 1: NETWORK DRIVE REGISTERS

S1.1 Drive Register Table Attributes

Table S.1 includes the following information:

a. Register #:

Indicates the drive register index to be used in the network request.

b. R/W:

Indicates if register is read/write or read only. Attempts to write Read-Only attributes are blocked and generally return a network fault.

c. Access type:

Specifies the register's type for determining access conditions. See "Data Transfer Summary" in the applicable user manual to determine how attribute types affect the acceptance of that register by the drive.

d. Description

Describes the function of the register.

S1.2 Write Access to Drive Registers

Network writes to Drive Data Register require:

1. "Option Card" - Must be selected in the "Control Source Select" (P.000) parameter.
2. If the accessed Register number is greater than 64: "Extended Set" must be selected in the "Network Connection Type (P.061) parameter.
3. If the accessed Register is a Tuneable or Configurable (cfg) type: "Tune/Config Inputs Enable bit" (Reg 32, bit 14) must be set.
4. If the accessed Register is a Configurable (cfg) type: The drive must be stopped.

Table S.1 – Drive Data Registers			
Register#	R/W	Access type	Description
0	RO	Runtime signal	Status word 1 (includes terminal block digital inputs)
			Bit 0 Drive ready
			Bit 1 Drive running
			Bit 2 Fault active
			Bit 3 Jog mode selected
			Bit 4 Reverse commanded
			Bit 5 Stop sequence in-progress
			Bit 6 Tune/Cnfg inputs enabled
			Bit 7 Sync flag echoed from network input
			Bit 8 Terminal block digital input 1 (start)
			Bit 9 Terminal block digital input 2 (stop)
			Bit 10 Terminal block digital input 3 (fault reset)
			Bit 11 Terminal block digital input 4 (run/jog)
			Bit 12 Terminal block digital input 5 (function loss)
			Bit 13 Terminal block digital input 6 (default: Fwd/Rev select) (P.007/P.008)
			Bit 14 Terminal block digital input 7 (default: Ramp1 2 Select) (P.007/P.008)
